

VELOCE

Modernize What Matters

Technical innovation can offer new ways for federal agencies to effectively modernize legacy systems and deliver quality services.

But technology alone can't achieve this goal in a way that improves the lives of those who rely on government services.

That's why Octo developed Veloce™.

Veloce is a life cycle modernization model that combines people, process, and culture-focused methods with emerging digital technologies and platforms to increase the velocity, speed, and scale of federal modernization efforts, create efficiencies, and make a greater impact.

Veloce Delivery Cycle Speed

584 Days $\xrightarrow{\text{reduced to}}$ **32-94** Days

Veloce addresses common pain points federal agencies experience when trying to modernize, including:

- **Pervasive shadow IT** leading to risks like lost data and expanded cyber-attack surfaces
- **Indiscriminate modernization investments** that erode ROI
- **Expensive, complex, and time-consuming** FedRAMP and ATO processes
- **Siloed modernization programs** that lead to fragmented implementations

veloce adverb or adjective

ve-lo-ce | \ vā-'lō-(,)chā

Definition of *veloce*

: in a rapid manner—used as a direction in music

Successfully deployed in some of the largest, most complex federal environments, Veloce catalyzes the implementation, and importantly, adoption, of emerging digital technologies and platforms.

6x Faster implementation time than traditional software solutions

90% Cost savings by digitizing information-intensive processes

>80% Faster time-to-value when solutions are included in an enterprise reuse catalog

With Veloce, federal agencies can:

- **Upskill the federal workforce:** Empower non-programmers, referred to as citizen developers, with the ability to experiment with new solutions to improve business efficiency, value, and agility
- **Ensure technical solutions are high-value and objective:** Instead of searching for problems to solve with the latest technology, identify the highest value needs of users and build toward those

- **Streamline security requirements:** Clear the backlog, expedite timeframes, and push security boundaries for maximum reuse through reduced complexity and focused processes
- **Govern for value:** Concentrate expertise in strategy, architecture, support, design, and development to create a scalable, centralized delivery model that removes organizational seams

Veloce Tech Ecosystem

We work with a global network of market leaders and innovators to give you the ability to move quickly and scale faster, with unrivaled access to top talent, technology, and expertise.
